Across all tides is one large body of water we call life. But what happens to waves as the tide rises and falls? The forces of attraction compared to that of the Earth are illustrated for a person weighing 1b on the Earth's surface. It won't be perfect. And once you're in a black hole, there is no low tide! However, the oceans' water is also constrained by the continents and varying ocean depths. At the right distance, a black hole's tidal force pulls in everything in its path including light. The tidal force is approximately 0. The distortion appears to be caused at least partially by the presence of the fluvial delta prograding into Iguape Bay. Conversely, cycles of days, months, or years are referred to as long period constituents.
