I agree to the terms and conditions. What are the MAJOR barriers to sharing information with Emergency Department personnel so that they can perform medication reconciliation? Each of these stages represents a possible risk point and a potential vulnerable link in the patient-safety chain. You can learn about what data of yours were retained, how it is processed, who it is shared with, and how it is used. Every medication error that goes unreported represents an error that will continue to be replicated and continue to put patients at risk. Issues relating to the end of life are often a part of caring for older patients in the ED. Medicines are used to treat diseases, manage conditions, and relieve symptoms. Hormone replacement therapy HRT and menopause Hormone replacement therapy HRT can reduce menopausal symptoms, but the benefits and risks need to be considered carefully
